

## Destia and Triona cooperate with the aim of developing the market for traffic information

**Triona has a long experience working with traffic information. Today Triona has customers within the area in Denmark, Finland, Norway and Sweden. Triona is also taking part in several European projects and in the Traveler Information and Services Association (TISA)\*. By getting into a closer cooperation with Destia Triona takes part in developing the market for traffic information.**

Destia already offers broadcasted traffic information by using an encrypted RDS-TMC service in Finland and is now in the phase of carrying out a larger roll-out of RDS-TMC services throughout the Nordic and Baltic countries. Apart from traffic information services Destia's knowledge in winter road condition and warning systems are one of the best in the world with the possibility to predict winter road conditions up to 6 hours ahead.

- Destia's experiences in the different fields are valuable when we work together with the aim of developing the market for traffic information. Destia's ambition to offer RDS-TMC services in all of the Nordic and Baltic countries is furthermore very important since it makes it appealing to the device manufacturing industry, with actors as Garmin, TomTom and so on, to invest in Destia's services for their respective devices, says Mats Bayard, CEO at Triona AB.

- Triona is our preferred partner and we have chosen to work with them because of their long experience in the traffic information area, their Nordic coverage and their investments in competence regarding upcoming traffic information standards and technologies, says Destia's CEO Jukka Laaksovirta.

Triona has offices in Borlänge, Falun, Göteborg, Oslo and Stockholm and was founded 1991. Triona offers expertise in the areas of system development and application management and has deep business knowledge within business solutions, road, rail and transport information, and data systems for the forest industry. Triona has approx. 80 employees. See also: [www.triona.se](http://www.triona.se)
